Projects

2025. 09
~ 2025.12

Cloud-based Loan Repayment Risk Monitoring and Prediction Platform

Team Leader

- Developed an integrated platform that leverages AI to predict loan repayment risks and monitor financial stability in real-time to prevent debt defaults.
- Engineered a Serverless AI pipeline using AWS (EventBridge & ECS Fargate) and established CI/CD workflows via GitHub Actions to ensure scalable and cost-effective operations.

2025. 09
~ 2025.12

Cloud-based Intelligent Smart Factory Integrated Control System

Personal Project

- Developed an integrated platform that leverages AI to predict loan repayment risks and monitor financial stability in real-time to prevent debt defaults.
- Engineered a Serverless AI pipeline using AWS (EventBridge & ECS Fargate) and established CI/CD workflows via GitHub Actions to ensure scalable and cost-effective operations.
